

## Directions for drill-less installation of 2017—current Ford Dually Rear Mud Flaps

Supplied Hardware: 4-1/4-20x1" Stainless Steel Black Oxide (SSBO) bolts; 10-1/4-20x1 1/4" SSBO bolts; 14- 1/4" SSBO washers; 2- Aluminum (AL) washers 1/4x5/8; 6- anodized 1/4-20 u-clips; 4- SS Flange Nuts; 2- #8 x 1.25" BO screws; 2– SSBO #10 washers; 2– #8 small anodized u-clips; **2- 8" Twist Brackets #10019**; **4- Ford Dually Z Brackets #10002** 

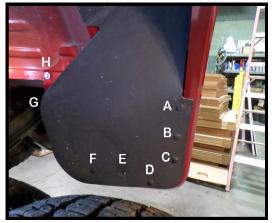

Thread locker is recommended for use on all bolts.

NOTE: As you progress with the install, check for square and plumb of the mud flap to the tire.

- Note: Smooth side is rear side, grooved side faces the tire, tapered corner on top is outside edge.
- Step 1: Remove the factory plastic pins and screws at points A,B,C,D, E and F. SAVE one push pin to reuse later at point D.
- Step 2: Lift the black inner fender liner forward and attach the supplied 1/4 20 U-CLIPS to the factory holes at **points (A,B, and C)**.
- Step 3: Use the factory bolt at **Point H** to attach the bent edge of the Z bracket. Hand tighten only.
- **NOTE:** If you have the optional plastic inner wheel well liner, use the hole at point G in the mud flap as a template, punch a hole in the liner to attach the flap directly to the liner. You can use the U clip that is on the bracket to secure the mud flap to the liner. <u>This must be done as the last step.</u> In this instance the Z bracket will not be used at **Point H**.
- Step 4: At Point I attach the straight edge of the Z bracket with the supplied 1" bolt and washer, secure it with the AL washer and flange nut. Rotate the bracket behind fender flare and line up the U clip with the factory hole at Point F.
- Note: Use a 1/4 20 bolt to align the bracket at point F and tighten point I. Then remove the bolt at F.
- Step 5: Replace the liner. Put the factory push pin back into hole D.
- Step 6: Attach the mud flap to the Z bracket at **Point (G)** using a supplied 1 1/4" bolt and washer. Leave it slightly loose for now (skip this step with optional wheel liner).
- Step 7: Use the 1 1/4" bolts with washers to attach the mud flap at points (A,B,C and F) Leave slightly loose.
- Step 8: Use the #8 screw and # 10 washer to secure **point (E)**
- Step 9: Attach the bent end of the twist bracket to the mud flap at **point K** use a 1" bolt, washer and flange nut.
- Step 10:Attach the straight end of the twist bracket under the rear fender panel at **point J**, use the factory nut and bolt. **Additional bending of the twist bracket may be necessary.** See images on back.
- Step 11:Check the mud flap for vertical alignment, adjust as needed. Tighten all bolts and screws.

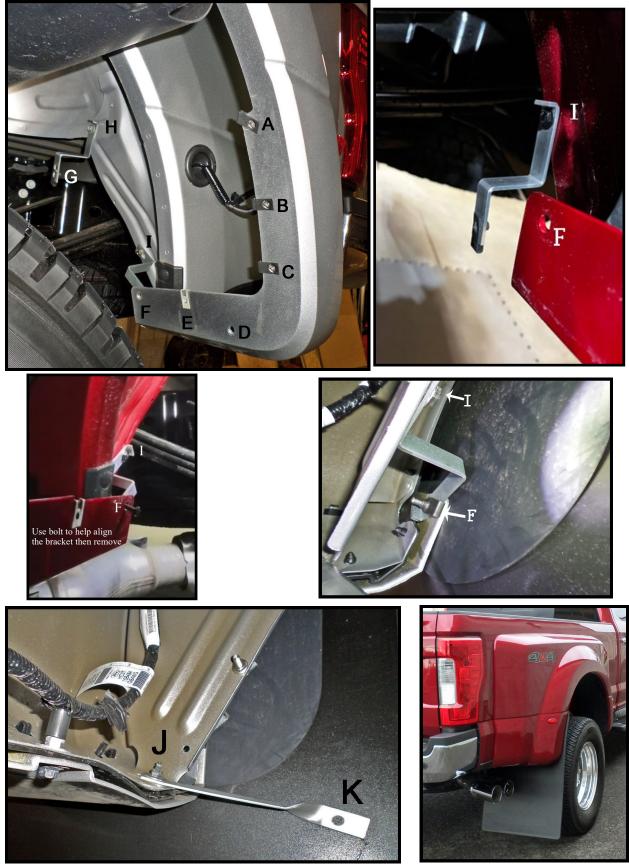

## Recheck every few months and retighten bolts if necessary.
